

OpenAir™

Air damper actuators with spring return

GPC..1A

Electric motor-driven rotary actuators for open-close, three-position and modulating control

- 4 Nm nominal torque
- Operating voltage AC 24 V ~ / DC 24...48 V = or AC 100...240 V ~
- Emergency function with spring return
- Prewired with 0.9 m connecting cable
- Position indication
- Auxiliary switches for auxiliary functions

Features

The spring return actuator drives the damper to the desired operating position after connecting the operating voltage. At the same time, the spring return, integrated in the actuator, is tensioned. In the event of a loss of operational voltage, the spring return automatically drives the damper to the defined emergency position.

- Brushless, robust DC motors ensure reliable operation regardless of load.
- The damper actuators do not require an end position switch, are overload proof, and remain in place upon reaching the end stop.
- The gears are maintenance free and low noise.
- Simple and reliable shaft fixation.
- Mounting bracket included.

The spring preload of 5° ensures safe closure of the air dampers.

Use

- Rotary actuator with spring return. Used on ventilation and air conditioning plants to operate air dampers that must be rotated to a defined emergency position during a power outage.
- For damper areas up to 0.6 m², friction dependent.
- Suitable for use with modulating controllers (DC 0/2...10 V), open-close or three-position controllers.
- For directly driven zone dampers to control air flow in air ducts.
- We recommend a minimum pulse length of 500 ms on rotary actuators operated with 3-point control to ensure continuous and accurate operation.

Control type		Open-close	Three-position	Modulating control
Rotary direction		Clockwise (cw) or counter-clockwise (ccw) direction depends on the mounting position on the damper shaft ...		
			... on the type of control.	... on the type of control ... on the setting of the rotary direction DIL switch (cw / ccw)
Emergency function		In the event of a power outage or switching off operating voltage, the spring return drives the actuator and damper, connected by the damper shaft, to the defined emergency position.		
Position indication: Mechanical		Rotary angle position indication by a position indicator.		
Position indication: Electrical				<ul style="list-style-type: none"> • Output voltage U = DC 0/2...10 V is generated proportional to the rotary angle. • U depends on the rotary direction of the DIL switch setting.
Auxiliary switches		Fixed position 5° / 85°		

Technical design/mechanical design

Housing

The housing consists essentially of flame retardant, non brominated, non chlorinated glass fibre reinforced plastic.

Notes

Safety

	⚠ Caution
	National safety regulations Failure to comply with national safety regulations may result in personal injury and property damage. <ul style="list-style-type: none">• Observe national provisions and comply with the appropriate safety regulations.• Use only properly trained technicians for mounting, commissioning, and servicing.

Engineering

Auxiliary switches

Auxiliary switches cannot be added in the field.

Installation

	⚠ WARNING
	<p>No internal line protection for supply lines to external consumers Risk of fire and injury due to short-circuits</p> <ul style="list-style-type: none"> Adapt the line diameters as per local regulations to the rated value of the installed fuse.

Maintenance

The rotary actuators with spring return GPC..1A are maintenance-free.

Disposal

	<p>The device is considered an electronics device for disposal in terms of European Directive 2012/19/EU and may not be disposed of as domestic garbage.</p> <ul style="list-style-type: none"> Dispose of the device through channels provided for this purpose. Comply with all local and currently applicable laws and regulations..
